**DETAILED ACTION**

***Specification***

Claims 1, 12, 22-25 & 28 are objected to under 37 CFR 1.75 as being in improper form because (a) claim 1 was not previously presented in the form applicant has submitted, the text is different. The examiner recommends that claim 1 be cancelled, as was previously done and the text of claim 1 be submitted as a new claim 62. (b) claim 12 is dependent on claim 11, which is cancelled. (c) claims 22-25 & 28 are not new claims these are previously cancelled claims. The Examiner recommends that these claims be cancelled, as previously done and the text of these claims be submitted as new claims 63-67. See MPEP § 608.01. Accordingly, the claims have not been further treated on the merits.

The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Accordingly, the claims 1, 12, 22-25 & 28 have not been further treated on the merits and stand withdrawn.

***Information Disclosure Statement***

The information disclosure statement filed 3/4/04 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 2-8, 10, 13-21, 27 & 29 are rejected under 35 U.S.C. 102(b) as being anticipated by Muellich (US Pat. 5,893,959).

Muellich discloses the welding of thermoplastic materials using a laser beam. The transmission coefficient is used to in order to impart a bond. After welding, the individual workpiece parts are substantially no longer distinguishable by the human eye. The proportions of the workpiece parts are joined in the visible region and dye pigment may be used for joining. Wavelengths of 1.06 um may be used. (abstract, figures, col. 3, lines 5-10, col. 7, lines 40-65)

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 26 & 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Muellich as stated in an above paragraph and further in view of Osborne (US Pat. 4,069,080).

Muellich does not specifically teach the use of thin films or fluoropolymer.

Osborne discloses bonding superposed sheets of polymeric material. A CO<sub>2</sub> gas laser is used for welding the plastic materials as the energy in the beam generated by the laser has wavelengths that are readily absorbed in the thermoplastic materials such as copolymers of vinyl chloride and vinylidene chloride and so forth. It would have been obvious to one of ordinary skill in the art at the time of the invention to use sheet material because this is merely a design substitution.

The types of materials chosen are a choice in design and substitutions of known equivalent structures may be made. In re Kuhle 188 USPQ (CCPA 1975) and In re Ruff 118 USPQ 343 (CCPA 1958). It would have been obvious to one of ordinary skill in the art at the time of the invention to use a fluoropolymer because it is a polymeric substitute. **Conclusion**
